

Technology 7 Syllabus 2025-2026

Jericho Middle School

Mr. Cooper - lcooper@jerichoschools.org

Technology is everywhere around us, on our smartphones, in the video games we play, the music we listen to, the medicine that helps people heal and even in the way we travel from place to place. Because it's such a big part of our world, learning about technology in middle school is incredibly important. In this class, you'll get the chance to explore your interests, try new tools and develop problem-solving skills step by step. Technology connects directly to the core subjects you already know: Math, English, and Science, but it lets you apply those skills in hands-on & creative ways. Think of this class as a place where you can learn how to take an idea and turn it into something real. That's what engineers, designers and inventors do every day and you'll be practicing those same skills here.

Technology class is all about STEM (Science, Technology, Engineering, and Math), but it's also about creativity, teamwork and learning from mistakes. You'll learn how to design, test, improve and build. This could be in coding a project, designing something to laser cut or 3D print, or working through an engineering challenge. By the end of this year you'll see that technology is not just about using devices. Technology is about understanding how things work, solving real-world problems and making something from nothing.

Materials

- A charged chromebook
- Pencils
- Computer Mouse

Course Outline

1. Measurement
2. Sketching
3. Engineering Design Process
4. 3-D Modeling / 3-D Printing
5. Hand & Power Tool Introduction
6. Design Projects
7. Computer Science / AI Tools

Grading

In Technology class we use a standards based grading system. This means that your projects will be looked at using rubrics that clearly show what is expected and how your work will be assessed. You will also have opportunities to provide evidence of your learning in different ways, not just through final projects. Grades are only one part of the picture, what really matters is how you grow, what you learn and how you apply your skills.

A	Mastery: Student makes inferences and/or applications that go beyond the simple and complex content that were explicitly taught.
B	Proficiency: Student demonstrates no major errors or omissions regarding any of the information and/or processes (SIMPLE OR COMPLEX) that were explicitly taught.
C	Initial Proficiency: Student demonstrates no major errors or omissions regarding the simpler details and processes BUT major errors or omissions regarding the more complex ideas and processes.
P	Passing: With help, student demonstrates a partial knowledge of some of the simpler and complex details and processes.
ND	Not Demonstrated: Even with help, student demonstrates no understanding or skills.

“+” Approaching next level of performance

Adapted from Classroom and Assessment and Grading that Work. Robert Marzano. 2006.

Classroom Expectations

Bathroom Policy

If you need to use the restroom/get water in class, you may do so, but please let me know when you leave the classroom.

Classroom Safety

Safety in our Technology classroom is extremely important. We will be working with a variety of tools, machines and materials that can be dangerous if they are not used properly. Because of this students are expected to follow all classroom expectations and teacher instructions at all times.

Before using certain tools or machines, students will need to pass a safety examination to demonstrate that they understand the correct procedures. In addition, students must always wear the appropriate protective gear, such as safety glasses or ear protection whenever it is required. Proper clothing is also part of classroom safety. Long sleeves, loose clothing or long hair worn down can be hazardous around moving parts, so students must come prepared by rolling up sleeves and tying back their hair when necessary. Our goal is for every student to be able to learn and explore in a safe environment. Unsafe behavior may result in the loss of tool privileges.

Classroom Environment

We expect the classroom to remain a clean, comfortable environment for everyone. Students are expected to clean up after themselves, whether it is during a project or a regular class session. If you have something to contribute to the class, raise your hand. Technology is a class where we value outside the box ideas, therefore we celebrate all ideas even ones that seem silly, strange or impossible!

Cellphone Policy

Cell phones will not be allowed in the classroom as per our school policy.

Artificial Intelligence

AI can be a wonderful tool for brainstorming and enhancing ideas. Students will use generative AI when appropriate and if the district and teacher allow.

Absences

Students are expected to be on time and in their seats. When a student is absent they should take it upon themselves to find the work they missed via. Canvas, email to Mr. Cooper, a friend etc.

Late Work

Students are expected to turn in all work on time, please see me when absent to obtain makeup work as needed.

Extra Help:

Extra help will be held after school by appointment, everyone is welcome to stop by.

Consequences for disrupting the classroom environment:

- 1st offense - Warning
- 2nd offense - Call home
- 3rd offense - Discussion with guidance counselor
- 4th offense - Discussion with Principal

****Email is the best way to reach me. Please allow a few hours for a response.**
